

ARDUINO INTERFACE APPLICATION DESIGN PROGRESS

V0.1:

- Created application base,
- Added input and output elements,
- Automatically connects to the hardcoded port,
- Gives error if the port is not exist.

V0.2:

- Removed the border,
- Colors balance changed with smoother colors,
- Added control box button (Exit),
- Added connection buttons,
- Connections are successfully established,
- Disconnection is successfully handled,
- Unnecessary code cleaned.

V0.3:

- Buttons relocated,
- Input works with 'enter' key,
- Port needs to be selected,
- Added more exception handle,
- Functionality missing at "Auto-Select, reload ports".

V0.4:

- Removed the 'output' label,
- Connection is stable, checks for connection for sending something,
- If an error happens, a warning message box will state what the issue is.

V0.5:

- Added image box to show where the camera look,
- Changed design.
